

Create a Google Maps Javascript API key

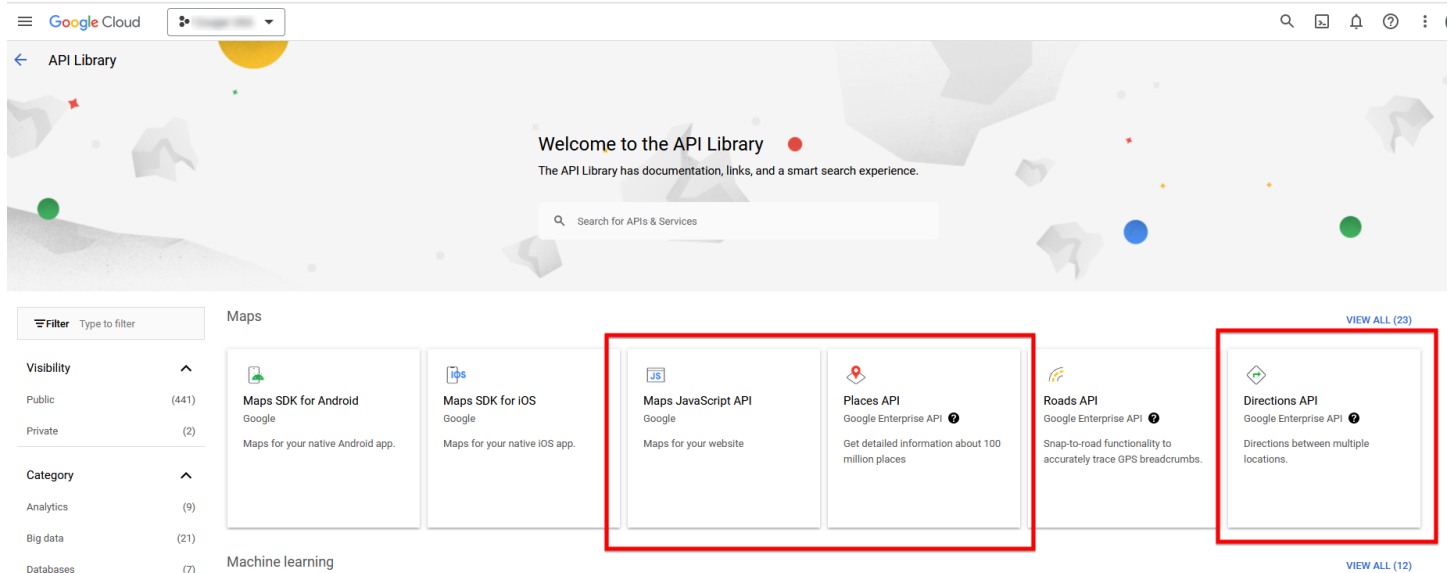

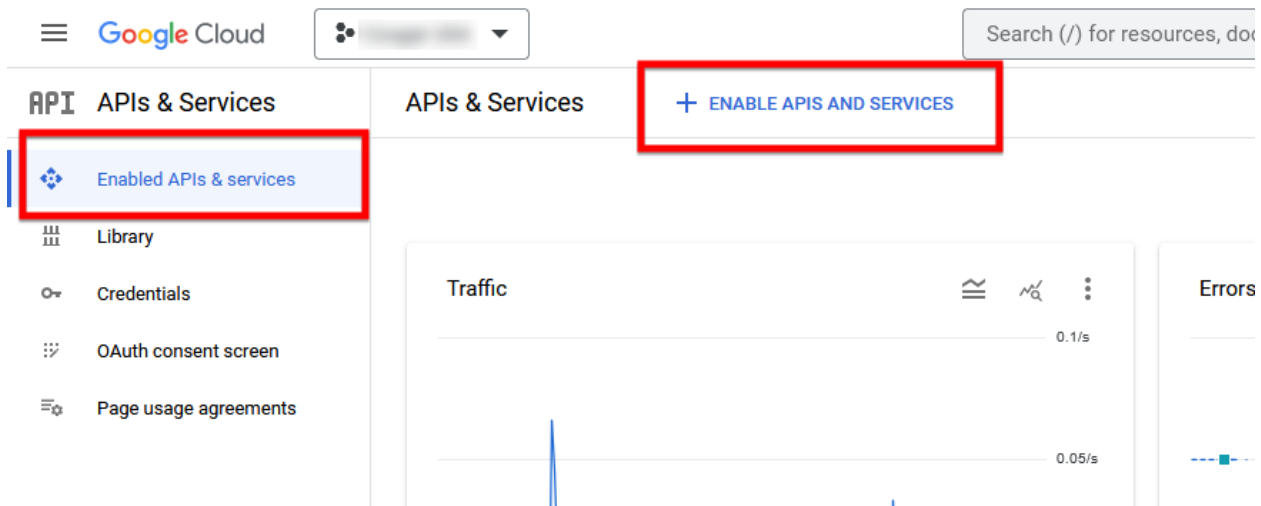

You will need to sign into the following portal with a Google account.

<https://console.cloud.google.com/cloud-resource-manager>

1. Create New Project

2. Enable APIs:

All of the following will need to be enabled:

1. Maps JavaScript
2. Geocoding
3. Geolocation
4. Directions
5. Places API

The new API key needs to be added to the component settings in the admin panel of the website.

Add Google API key to My Maps Locations component configuration

Please navigate to the following and copy and paste the new API key in place of the previous one.

Components > My Maps Locations > Configuration

Then under General Configuration, there is a field for the Google Maps API key.

Replace the key that is in that field with the new one.

The screenshot shows the Joomla! Configuration interface. On the left is a sidebar menu with 'My Maps location' selected. The main content area is titled 'Configuration' and has a 'General configuration' tab highlighted with a red box. Below the tabs, there's a section for 'My Maps location' with a red box around the 'Google Maps API key' field. The field contains a blurred key and has a red box around it. Below the field, it says 'The Google Maps API key is mandatory'. Other configuration options like 'Enable Statistics', 'AJAX search', 'Display Distance', 'Unit of distance', 'Map provider', and 'Autocomplete search' are visible.
